

# Adapting to change in clinical practice: a post-inflammatory hyperpigmentation case

BY AMIEE VYAS

## CPD Feedback form

Please print out our questionnaire, complete the questions below and sign.

Keep for your records.

1. Tyrosinase is the rate limiting enzyme required for:
  - Melanin transfer
  - Melanin production (melanogenesis)
  - Melanin distribution
  
2. Glycolic acid is a helpful agent to treat acne PIH because:
  - It is a powerful exfoliator
  - It has bactericidal properties
  - It reduces epidermal melanin clumping
  - All of the above
  
3. Skin of colour patients do not require an acclimatisation period to active ingredients before undergoing chemical peels:
  - True
  - False
  
4. Which of the following statements about cysteamine are true:
  - It is not a naturally occurring ingredient
  - It has a single mechanism of action
  - It has been proven to have better efficacy and tolerability than Kligman Formula.
